

*We produce biodegradable plastic packaging components enhanced with **Eco-One**® additives.*

As a worldwide provider of plastic packaging components, Allen Field Co. is consistently embracing sustainable business practices. We view each product as a chance to create an impact. If you share our concerns regarding plastic production and disposal, our biodegradable plastic products offer an ideal solution for you!

Advantages:

- ⌘ 100% Organic & Non-Starch Based
- ⌘ Biodegradation Enhanced
- ⌘ Recyclability Unaffected
- ⌘ Renewable Energy Source
- ⌘ Scientifically Verified
- ⌘ Accepted by Major National Brands

Eco-One® is a brand of organic additives which enhance the biodegradation of plastic products in a biologically active landfill (not available in all areas). ASTM D5511 tests (representing biologically active landfills) carried out for durations ranging from 1 to 12 months, on a broad category of product containing Eco-One have shown excellent biodegradation rates. It is important to note that biodegradation will begin and will continue leading to significant bio-assimilation, shortening the time span the plastic would have occupied the landfill space from hundreds of years to several years.
